

Enjoy moments of serenity while watching the soft glow of a burning candle. The sweet aroma of a 100% beeswax candle is naturally hypoallergenic and produces negative ions that have numerous benefits, including increasing the body's production of serotonin, the brain's "happy chemical," aiding in stress relief, and purifying the air. This makes beeswax especially beneficial to those with respiratory issues such as asthma and emphysema.

Beeswax is the purest of all candle waxes and, because of its higher melting point, burns up to twice as long as other candle waxes.

Our tapers are made by hand by dipping a braided cotton wick more than twenty times, smoothly and steadily, into beeswax melted to a specific temperature. They will burn dripless when kept out of drafts.

When burning our pillar candles, trim the wick to 1/4" and allow the wax to melt close to the outer edge of the candle before extinguishing it. This will extend the life of the candle by allowing it to burn evenly across the top. After burning, gently hug the perimeter of the candle inward to help avoid tunneling.
